

# Hypotheses on the Textual Interrelations of Some Medieval Manuscripts in the Transmission of the Pseudo-Platonic *De iusto* and *De virtute*.

Akitsugu Taki

## Abstract

On the basis of my collation of the digital reproductions I hypothesize on the textual interrelations of the medieval manuscripts of the two concomitantly transmitted pseudo-Platonic works *De iusto* and *De virtute* that Parisinus graecus 1807 has a relative ascendancy over the others bifurcated into the two sub-groups, the one descendant from Vaticanus graecus 1 and the other descendant from, and in part contaminated with, Parisinus graecus 1808.

**Key Words:** textual criticism; *Spuria*; *De iusto*; *De virtute*; Parisinus graecus 1807; Parisinus graecus 1808

The Pseudo-Platonic works *De iusto* and *De virtute*, both known to Stobaeus under Plato's authorship (3.1.204; 3.12.25), are always transmitted concomitantly among all the extant medieval manuscripts of Plato's works and in their common medieval manuscripts, twenty-six all told, both are always arranged in this ordering at the beginning of Plato's spurious works (voθευόμενοι)<sup>1</sup>.

Among those twenty-six manuscripts, I collated thirteen and reported the results of each work in different articles<sup>2</sup>.

From the analyses below on the basis of these results I will propose the following hypotheses on the textual interrelations of those thirteen manuscripts<sup>3</sup>.

H1: The extant medieval transmission sometimes has a common error.

H2: A common ancestor of the extant medieval manuscripts is not derived from the exemplar Stobaeus used.

H3: B, V, C, M Y, and a are separated as a group from A, O, R, J, L and Ψ.

H4: A is the ancestor of the others.

H5: Among the B group, V has no ascendancy over the others.

H6: Among the B group, C, M and Y, none of which is an ancestor of the others, form a sub-group against the others.

H7: Among that sub-group, neither M nor Y is derived from C

H8. Among that sub-group, neither C nor M is derived from Y.

H9: Among the B group, a and c are directly derived from B.

H10: c is directly derived from a.

H11: Among the B group, B has a relative ascendancy over the others.

H12: Among the B group, V is directly derived from B.

H13: Among the O group, R, J, L and Ψ are independently derived from O.

1. H1: The extant medieval transmission sometimes has a common error.

The medieval manuscripts I collated have in common at *De iusto* 375a7 an omission which a later scribe could hardly supply without looking at some other sources.

D. iu. 375a7 καὶ τῷ καιρῷ Boeckh: καιρῷ/καιρῷ/καιρῷ AORJLΨ B VCMY a c Stob.

Therefore this variant indicates that the extant medieval transmission sometimes has a common error.

This conclusion is corroborated by the following variants.

3. H3: B, V, C, M, Y, and **a** are separated as a group from A, O, R, J, L and Ψ.

6. H6: Among the B group, C, M and Y, none of which is an ancestor of the others, form a sub-group against the others.

At *De virtute* 376c3 C, M and Y agree in omission against the other manuscripts. Therefore they possibly form a group.

C has a peculiar error. Therefore neither M nor Y is derived from C.

8. H8. Among that sub-group, neither C nor M is derived from Y.

**a** and **c** agree against the other manuscripts in a hardly reparable error of the kind mentioned above.

D. iu. 374a7 ἔχει AORJL Ψ BV CMY: ἔφη **a c**

Therefore neither has ascendancy over the others.

At *De iusto* 374b1 **a** and **c** agree with B against the other manuscripts in scholion. Therefore **a** and **c** are directly derived from B.

10. H10: c is directly derived from a.

c has against the other manuscripts some hardly suppleable omissions of the kind mentioned above.

D. iu. 373c7 ἦν γάρ ... ἐκρίνετο om. c (homoeoteleuti ἐκρίνετο causa)

D. iu. 373e5 εἴποιμεν ... κοῦφον om. c (homoeoteleuti κοῦφον causa)

D. iu. 375d10 οὐκ om. c

Hence c is probably directly derived from a. This hypothesis is corroborated by the agreement of c with a<sup>pc</sup> at the variants *De virtute* 372a5, 374d7 and 378e6 (see above at section 3) and by c's following peculiar error.

*De iu. 373e7 δὲ AORJLΨ B CMY a<sup>pc</sup>(δὲ s.l. eadem manu) Boeckh: καὶ V a<sup>ac</sup> δὲ καὶ c*

11. H11: Among the B group, B has a relative ascendancy over the others.

Since, as the variants in sections 5 to 10 show, no other manuscript among the B group has ascendancy, B is more likely than the others to be an ancestor of the group. This ascendancy is corroborated by the variants at *De virtute* 376b3 and 379c2.

However, as the variants in *scholion ad De iusto* 374b1 (see section 9) and at *De virtute* 378e4 (see the next section) and 379d4 suggest, B is not directly derived from A<sup>5</sup>.

13. H13: Among the O group R, J, L and Ψ are independently derived from O.

Each of R, J, L and Ψ has against the other manuscripts some hardly suppleable omissions of the kind mentioned above, whereas O's peculiar omissions and errors could have been mended by the scribe or some later correctors before the composition of the other manuscripts. Therefore O has a relative ascendancy over R, J, L and Ψ and the latter four are independently derived from O<sup>8</sup>.
